

Saturn Group has now been established for 17 years and is still a privately owned company, operating from Farnworth, Bolton, Gtr. Manchester.

Saturn lighting offer a comprehensive range of products under the “Preslite” trade name.

Saturn lighting products include flood lighting, industrial lowbays and hi-bays, fluorescent recessed, surface, display fittings and Aquamax non - corrosive fittings, also fire alarms and emergency lighting. We also offer a conversion and repair service to the majority of other manufacturer’s fittings. All Saturn’s products are available through Electrical wholesalers and distributors throughout the UK.

Saturn lighting has its own lighting and technical department, based at Bolton offering technical support and lighting schemes designed by our LIF engineers using the Relux Lighting Design Package.

The Haloline fitting is similar in appearance to the Opaline fitting. The rear of the fitting has Clear or coloured inserts which produces a halo effect around the fitting. Shown above is a section from the back of the fitting to show the inserts which allow the light to be emitted from the rear of the fitting. Here shown in Blue but Clear fitted as standard.

N.B.G12 Coloured lamps available in 70 and 150 watt

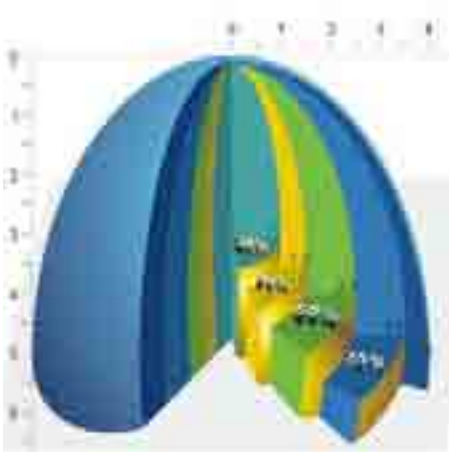

The Prestronic range of Microwave sensors can be fitted either integral or remote to any fluorescent luminaire to enable large savings in energy use and acheive reductions in Carbon ommissions.

Microwave Sensors

CDDME

CDDME This is the simplest version of the Prestronic sensor range. It can be built into fittings or used as an individual sensor when mounted in the CDDMIP enclosure. It is able to provide the following functions:

- 1. Switch On/Off
- 2. Dimming when used in conjunction with Prestronic sensorDIM ballasts only.
- 3. Detection area. The detection area can be adjusted precisely using the DIP switches on the detector.
- 4. Hold Time. The time the fittings are held on at 100% can be adjusted using the DIP switches on the detector.
- 5. Daylight Sensing. This allows the sensor to be set to work in Daylight/Twilight/Darkness as required. This function is available only when mounted in CDDMIP enclosure.

Technical Data

Operating Voltage	220-240V +/- 10% 50/60Hz
Switching Capacity	800W (resistive load), 400W (inductive load), Unlimited load with Prestronic Ballast
Standby Power	<1W
Detection Area	20/30/50/75/100% adjusted by DIP switches
Hold Time	5s/30s/300s/20min/25min adjusted by DIP switches
Daylight Threshold	2-500 lux daylight/twilight/darkness adjusted by DIP switches
Sensor Principle	Microwave Motion Detector
Microwave Frequency	5.8 GHz +/- 75 MHz
Microwave Power	<1mw
Detection Range	Max 5 m
Detection Angle	30-150°
Motion Detection	1-20km/h
Mounting Height	3-5 m
Operating Temperature	0°C to +50°C
IP Rating	IP20 (mounted inside a fitting), IP54 (mounted in CDDMIP enclosure)

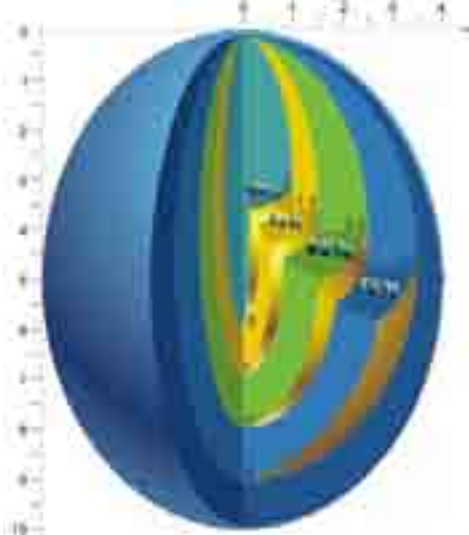

Microwave Sensors

CDDMS This is the standard version of the Prestronic sensor range. It can be built into fittings or used as an individual sensor Indoors or Outdoors when mounted in the CDDMIP enclosure. It provides the following functions:

- 1. Switch On/Off
- 2. Dimming when used in conjunction with Prestronic sensorDIM ballasts only.
- 3. Detection area. The detection area can be adjusted precisely using the DIP switches on the detector.
- 4. Hold Time. The time the fittings are held on at 100% can be adjusted using the DIP switches on the detector.
- 5. Daylight Sensing. This allows the sensor to be set to work in Daylight/Twilight/Darkness as required. This function is available only when mounted in CDDMIP enclosure.

CDDMS

Technical Data

Operating Voltage	220-240V +/- 10% 50/60Hz
Switching Capacity	1000W (resistive load), 400W (inductive load), Unlimited load with Prestronic Ballast
Standby Power	0.6W
Detection Area	20/30/50/75/100% adjusted by DIP switches
Hold Time	5s/30s/300s/15min/25min adjusted by DIP switches
Daylight Threshold	2-500 lux daylight/twilight/darkness adjusted by DIP switches
Sensor Principle	Microwave Motion Detector
Microwave Frequency	5.8 GHz +/- 75 MHz
Microwave Power	1mw
Detection Range	Max 10 m
Detection Angle	30-150°
Motion Detection	1-20km/h (<3m mounting height); 1-200km/h (>5m mounting height)
Mounting Height	3-10 m
Operating Temperature	-35°C to +70°C
IP Rating	IP20 (mounted inside a fitting), IP54 (mounted in CDDMIP enclosure)

CDDMR

Microwave Sensors

CDDMR This is the reinforced version of the Prestronic sensor range. It has all the functions of the standard sensor and can be built into fittings or used as an individual sensor Indoors or Outdoors when mounted in the CDDMIP enclosure. By inceasing the power of the microwave it can detect up to 20m. It provides the same functions as the standard version:

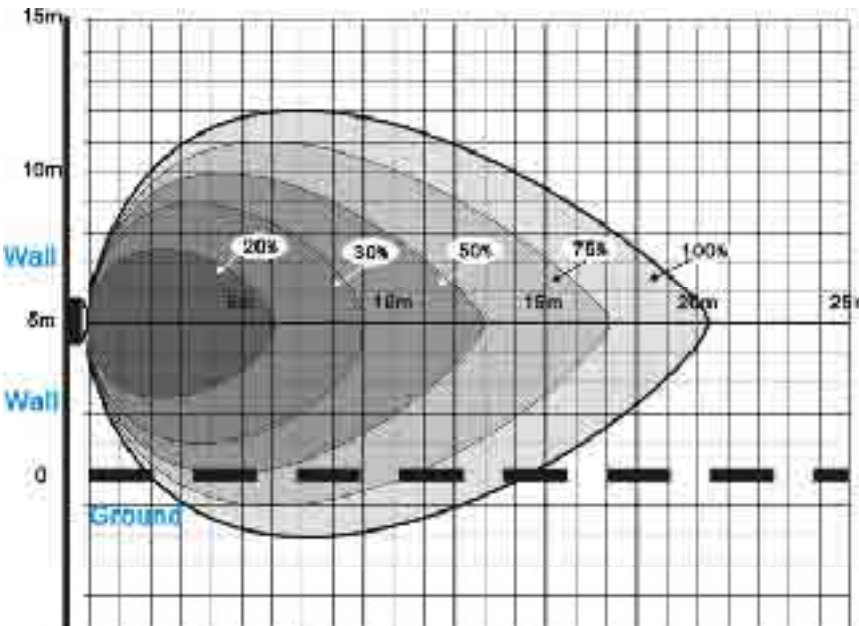

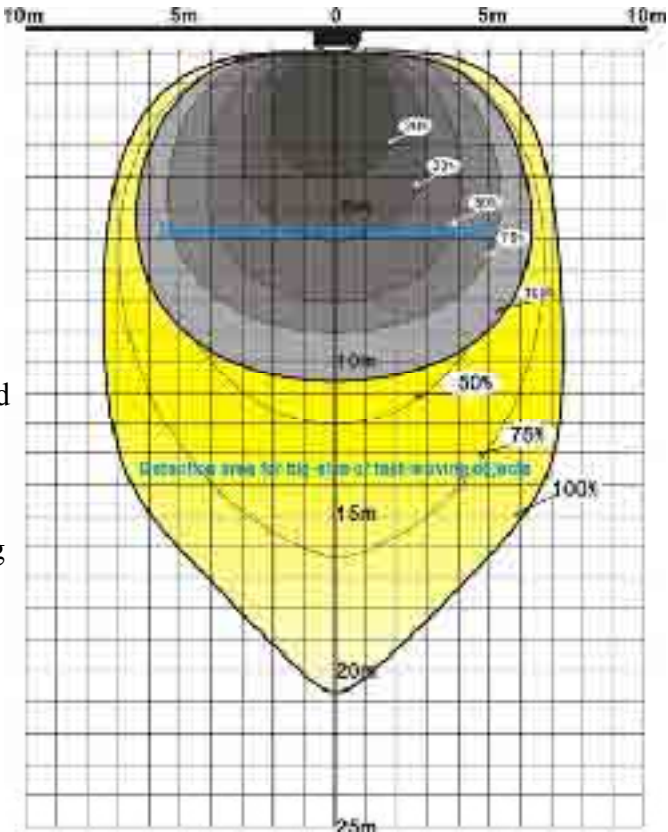

- 1. Switch On/Off
- 2. Dimming when used in conjunction with Prestronic sensorDIM ballasts only.
- 3. Detection area. The detection area can be adjusted precisely using the DIP switches on the detector.
- 4. Hold Time. The time the fittings are held on at 100% can be adjusted as for detection using the DIP switches on the detector.
- 5. Daylight Sensing. This allows the sensor to be set to work in Daylight/Twilight/Darkness as required. This function is available only when mounted in CDDMIP enclosure.

Technical Data

Operating Voltage	220-240V +/- 10% 50/60Hz
Switching Capacity	1000W (resistive load), 400W (inductive load), Unlimited load with Prestronic Ballast
Standby Power	0.6W
Detection Area	20/30/50/75/100% adjusted by DIP switches
Hold Time	5s/30s/300s/15min/25min adjusted by DIP switches
Daylight Threshold	2-500 lux daylight/twilight/darkness adjusted by DIP switches
Sensor Principle	Microwave Motion Detector
Microwave Frequency	5.8 GHz +/- 75 MHz
Microwave Power	2mw
Detection Range	Max 20 m
Detection Angle	30-150°
Motion Detection	1-20km/h (<3m mounting height); 1-200km/h (>5m mounting height)
Mounting Height	3-10 m
Operating Temperature	-35°C to +70°C
IP Rating	IP20 (mounted inside a fitting), IP54 (mounted in CDDMIP enclosure)

When using microwave sensors it is important to remember that the sensitivity is closely related to speed and reflective surface area. In normal cases, the minimum reflection surface is equal to the human trunk, all Prestronic products are based on this minimum reflective surface. However, when the CDDMR is mounted at or near 20m, the reflection surface is then only the human head and shoulder, which is a much smaller area than the trunk. In such cases, compensation in moving speed is needed to keep the same detection area; if there is no speed compensation, then the detection area is reduced by about half.

To the side and below are the combined diagrams for the reinforced version (CDDMR), showing different mounting heights and detection areas for the different applications (the grey part for normal body detection, the yellow part for big-size or fast-moving objects detection)

CDDMC

Microwave Sensors

CDDMC This is a motion detector with a long sensing range and is suitable in its application for traffic areas with temporary occupation, such as corridors, pathways and general circulation areas. It provides the following functions:

- 1. Switch On/Off
 - 2. Dimming a) When used in conjunction with Prestronic sensorDIM ballasts
b) Provides 1-10 volt output for use with any analogue dimmable ballast
 - 3. Corridor Function; Movement detected 100% output, No movement detected light level dimmed after preset time, after second preset time fitting switched off.
 - 4. Detection area. The detection area can be adjusted precisely using the DIP switches on the detector.
 - 5. Hold Time. The time the fittings are held on at 100% can be adjusted using the DIP switches on the detector.
 - 6. Daylight Sensing. This allows the sensor to be set to work in Daylight/Twilight/Darkness as required using remote sensors mounted within the fitting.
- See page 34 for sensor heads.

Technical Data

Operating Voltage	220-240V +/- 10% 50/60Hz
Switching Capacity	2500W (resistive load), 800W (inductive load), Unlimited load with Prestronic Ballast
Standby Power	<1W
Detection Area	20/30/50/75/100% adjusted by DIP switches
Hold Time	5s/30s/300s/15min/25min adjusted by DIP switches
Daylight Threshold	2-500 lux daylight/twilight/darkness adjusted by DIP switches
Sensor Principle	Microwave Motion Detector
Microwave Frequency	5.8 GHz +/- 75 MHz
Microwave Power	<1mw
Detection Range	Max 10 m
Detection Angle	30-150°
Motion Detection	1-20km/h (<3m mounting height); 1-200km/h (>5m mounting height)
Mounting Height	3-5 m
Operating Temperature	-35°C to +70°C
IP Rating	IP20 (mounted inside a fitting), IP54 (mounted in CDDMIP enclosure)

Microwave Sensors

CDDMA This is a presence detector for use in areas such as offices, call centers and classrooms, where there is occupation of the room or area but only small or restricted movements. It provides the following functions:

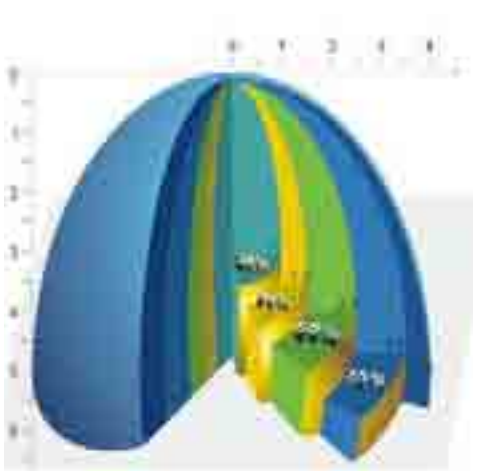

- 1. Switch On/Off
 - 2. Dimming a) When used in conjunction with Prestronic sensorDIM ballasts
b) Provides 1-10 volt output for use with any analogue dimmable ballast
 - 3. Stand-by Function; Movement detected 100% output, No movement detected light level dimmed after preset time, after second preset time fitting switched off.
 - 4. Detection area. The detection area can be adjusted precisely using the DIP switches on the detector.
 - 5. Hold Time. The time the fittings are held on at 100% can be adjusted using the DIP switches on the detector.
 - 6. Daylight Sensing. This allows the sensor to be set to work in Daylight/Twilight/Darkness as required using remote sensors mounted within the fitting.
- See page 34 for sensor heads.

Technical Data

Operating Voltage	220-240V +/- 10% 50/60Hz
Switching Capacity	2500W (resistive load), 800W (inductive load), Unlimited load with Prestronic Ballast
Standby Power	<1W
Detection Area	20/30/50/75/100% adjusted by DIP switches
Hold Time	5s/30s/300s/15min/25min adjusted by DIP switches
Daylight Threshold	2-500 lux daylight/twilight/darkness adjusted by DIP switches
Sensor Principle	Microwave Motion Detector
Microwave Frequency	5.8 GHz +/- 75 MHz
Microwave Power	<1mw
Detection Range	Max 6 m
Detection Angle	30-150°
Motion Detection	Very small movements such as typing, reading and conversation
Mounting Height	3-5 m
Operating Temperature	-35°C to +70°C
IP Rating	IP20 (mounted inside a fitting), IP54 (mounted in CDDMIP enclosure)

CDDMA

Lux Controller

CDDPCH The Lux controller can be used to control individual or groups of fittings to a maximum of 400 watts inductive. The controller provides two control outputs, the first, via the 1-10 volt output dims the fittings to the required level to provide lighting to the selected lux level. The second output switches the fittings off, once the lux value is exceeded by natural daylight.

Technical Data

Operating Voltage	110-277V 50/60Hz
Switching Capacity	400W inductive load
Standby Power	<0.6W
Output Signal	1-10V
Lux Values	50/100/200/300/500/700 adjusted by DIP switches
Operating Temperature	-35°C to +70°C
IP Rating	IP20

Sensor Options

The basic sensor can be mounted in three ways using the attachments illustrated.

- 1. Surface mounting. The sensor is attached to the bracket and mounted onto a flat surface.
- 2. Recessed mounting. Using a plastic nut the sensor can be recessed into a suitable flat surface
- 3. The sensor can be mounted directly onto a T5 or T8 tube using the plastic finger attached to the back of the bracket.

The cable length is 1 meter.

N.B. The 4 x 55W Flo-bay has the equivalent lumen output of a 250W HQI Lowbay but only uses 220 circuit watts of energy.

The Flo-bay is an energy efficient fitting which may be controlled by a PIR sensor, thus allowing areas of low usage to reduce the lighting to minimum levels until needed.

The Powerlux is a highly energy efficient fitting with a Light Output Ratio of over 92%. The body is manufactured from folded and welded sheet steel, powder coated white. The reflectors are made from Miro 4 aluminium. It is an ideal replacement for Highbays and Lowbays in Warehousing, Retail Units, Sports Halls and Factories. Additional energy savings can be achieved by incorporation of movement sensors and lux level controls into this fitting.

No Options available for the Economy Version

The Economy Powerlux keeps the energy efficiency of the Powerlux fitting using the design of reflectors. However, in order to keep the costs of this fitting to a minimum it can not be fitted with all the options of the Powerlux.

The gear box is constructed from white painted pressed steel. The reflector is spun aluminium. Supplied with lamp and 230-240V 50Hz control gear

A timed ignitor is now fitted as standard to all SON and HQI fittings

Note

Polycarbonate lenses discolour when used in conjunction with Metal Halide (HQI) lamps. The UV emissions which cause the discoloration are partially screened by the toughened glass internal lense (250/400W only) providing longer lens life.

Discoloration of the polycarbonate lens does not constitute a fault. Replacement polycarbonate lenses are available. Order code **HPD**.

A fully recessed emergency luminaire with a white or chrome frame and a prismatic diffuser. Ideal for use in suspended ceilings.

Product Code	
ZES10NM	Non-maintained LED
ZES11M	Maintained LED

The LED luminaire is the smallest emergency bulkhead currently available. This fitting is so unobtrusive it will not look out of place in any installation.

Product Code	
ZES50NM	Non-maintained LED

The traditional crystal fitting brought up to date by the use of a high output LED lamp source.

Product Code		Length	Width	Depth
ZES100	Maintained LED/	345	108	72
	Non Maintained LED			

Battery	3.6V (3 cell) 2.8Ah High Temperature Ni-Cd
Battery Temp	55 Deg C intermittent max 50 Deg C continuous max
Recharge Time	24 Hours
Duration	3 hour

Product Code		Length	Width	Depth
ZES38	Maintained LED/	395	192	60
	Non Maintained LED			

Battery	3.6V (3 cell) 900mAh High Temperature Ni-Cd
Battery Temp	55 Deg C intermittent max 50 Deg C continuous max
Recharge Time	24 Hours
Duration	3 hour

Product Code		368 x 188 x 24mm
ZES31M	Maintained LED	

Options add suffix to product code	
C	Chrome
W	White

The Starsign is the ideal blade luminaire where appearance is of importance.

Product Code	
ZES91M	8W Maintained 3 hour

Dimensions

335 x 115 x 5mm (ex. legend)
Void depth required = 60mm

Cut out = 365 x 93mm

This modern edge-lit blade fitting has a completely recessed body and is ideal for use where a prestigious appearance is required.

Low Voltage Conversions

An emergency conversion pack for almost every low voltage dichroic application

Product Code

ZE901 20-50W non-maintained 1-3 hour
ZE911 20-50W maintained 1-3 hour

Battery 6V 4AH Ni-CD
Rating 50VA
Duration 20W – 3 hour
50W – 1 hour
To Suit 50mm Dia Cutout

LED Conversions

An emergency conversion pack for use with any MR16 LED lamps

Product Code

ZES612M Maintained 3 hour

Battery 12V (10 cell) 2300Ah High Temperature Ni-Cd
Battery Temp 55 Deg C intermittent max
50 Deg C continuous max
Charge Current 120 mA
Recharge Time 24 Hours
Duration 3 hour (minimum)
To Suit 50mm Dia Cutout

LED Conversions

The Retro Star is a complete replacement for existing 8 watt bulkhead gear trays. It can ‘repair’ an 8 watt bulkhead in 2 minutes.

Product Code

ZES8000

Specification	
Light Source	High output White LED
Construction	Polycarbonate tray
Battery	4.8 Volt 900mA Nicad
Charge Current	50mA Nominal
Input Voltage	230 Volt AC +10% -6% 50 Hz
Size	305mm x 60mm x 18mm

LED Conversions

A complete 2D HF mains plus 2 x 1 watt LED emergency gear tray, which will retrofit into all the most popular 2D bulkheads

Product Code

ZESL16HF 16W 2D + 2 x 1W LED
ZESL28HF 28W 2D + 2 x 1W LED
ZESL38HF 38W 2D + 2 x 1W LED

Specification

240v Circuit
Ballast Philips(or equal) HF Ballast
Available in 16w, 28w and 38w versions

Emergency Circuit
Lamps 2 x 1 watt White LED's
Lumen Output 160 lumens
Charge Current 130 mA
Battery 4.8 v 2.5 AH Nicad
Emergency Duration 3 hours

Dimensions 260mm Dia

LED Conversions

A complete 2D HF mains plus 2 x 1 watt LED emergency “ Top Hat “ gear tray, which will retrofit into virtually all 2D luminaires.

Product Code

ZESH16HF 16W 2D + 2 x 1W LED
ZESH28HF 28W 2D + 2 x 1W LED
ZESH38HF 38W 2D + 2 x 1W LED

Specification

240v Circuit
Ballast Philips(or equal) HF Ballast
Available in 16w, 28w and 38w versions

Emergency Circuit
Lamps 2 x 1 watt White LED's
Lumen Output 160 lumens
Charge Current 130 mA
Battery 4.8 v 2.5 AH Nicad
Emergency Duration 3 hours

Dimensions L175mm x W155mm x H35mm

LED Conversion Pack

A 2 x 1 watt LED emergency conversion pack, complete with battery stick, able to be fitted into almost any mains luminaire..

Product Code

ZESLP2 2 x 1W LED

Specification

Lamps 2 x 1 watt White LED's
Lumen Output 160 lumens
Charge Current 130 mA
Battery 4.8 v 2.5 AH Nicad
Emergency Duration 3 hours

Dimensions

Charger Module L120mm x W28mm x H33mm
Battery L104mm x W52mm x H23mm
LED's 28mm Dia

Fluorescent Conversion Service

Remote Conversion

Need to convert fluorescent fittings to emergency?

Saturn offers a luminaire conversion service in our custom designed centre and can convert most standard fluorescent fittings for emergency.

Where there is insufficient space within the luminaire a remote enclosure can be provided.

For further details please contact the Sales Office

We are now able to convert fluorescent fittings to LED emergency.

Instead of relying on the fluorescent tubes within the fitting, why not fit LED's to act as the emergency light source? The long lamp life of the LED will ensure light at the most vital times.

For further details please contact the Sales Office

Emergency Lighting Requirements

When luminaires have been sited to cover the locations below, additional luminaires may be required to ensure minimum lighting levels are achieved

Escape Routes Corridors etc

1 lux minimum on the centre line of the escape route

Open Areas

0.5 lux minimum in the central area to 0.5 m of the walls

Exit signs

Signs should meet with the European Signs Directive and be either back illuminated or have an emergency luminaire within 2 metres of horizontal height. Signs should be of the same format throughout the building

To provide illumination of escape routes

Install within 2 metres of escape route junctions

Install within 2 metres horizontal distance of a change of direction in an escape route

Install within 2 metres horizontal distance of change in floor/stairs level (each tread to receive direct light)

Install externally within 2 metres horizontal distance of any final exits Please note that sufficient light will be needed to muster a roll call

Fire alarms, first aid points and fire fighting equipment, install within 2 metres horizontal distance

Should not be used as an escape route, but requires the same illumination to protect users on it when supply fails

Install in all toilets exceeding 8m² area or where natural light is not present

To provide emergency illumination in all lifts

Motor generator, control and plant rooms for essential and safety services

Open rooms either with a particular hazard, an escape route passing through a larger than 60m² area

Areas of high risk could be illuminated to 10% of normal lighting or 15 lux, whichever is greater

Repair And Refurbishment

Have you got flickering fluorescents or a faulty flood? Perhaps you have fittings with switch start ballasts that you want to keep but their energy requirements make them too costly to run. Then let us quote for the repair or refurbishment of those fittings.

We are able to test fittings and replace faulty components or burnt out wiring.

We can strip out the old costly to run switch start ballasts and replace them with energy efficient high frequency ballasts.

Just ring our Sales Office and we can discuss your needs.

TEL: 01204 575100

- 7 Protection against immersion down to 1m
- 8 Protection against long periods of immersion under pressure

Emergency Fitting Types

NON-MAINTAINED

The lamp in the luminaire ONLY operates from the inbuilt emergency supply, and ONLY when the normal supply fails. THE LAMP IS NOT LIT IN NORMAL MAINS HEALTHY MODE. The lumen out put of the lamp in emergency mode is a function of the batteries and NOT the lamp rating

MAINTAINED

The lamp or lamps in the luminaire can be operated as a normal light source and switched on or off as required. This is achieved by supplying two mains supplies to the luminaire (one permanent supply and one switched supply), on failure of the mains supply the lamp connected to the inbuilt emergency supply remains illuminated. The lumen out put of the lamp in emergency mode is a function of the batteries and NOT the lamp rating

SUSTAINED (COMBINED)

An emergency luminaire with at least two lamps. One of the lamps operates ONLY from the inbuilt emergency supply and is not lit in normal operation.
